

Erdogan Madenci is a professor of Aerospace and Mechanical engineering at the University of Arizona. Prior to his academic appointment, he worked in aerospace industry for many years. He has authored more than 300 technical articles on structural dynamics, fracture mechanics, failure analysis of fiber-reinforced composites and electronic packages, finite and boundary element methods, plates and shells, buckling/post-buckling of aerospace structures, and peridynamic theory. He is the lead author of three books: Peridynamic Theory and its Applications, The Finite Element Method and Applications in Engineering Using ANSYS, and Fatigue Life Prediction of Solder Joints in Electronic Packages with ANSYS. B.S. (1980) and M.S. (1982), Lehigh University, Ph.D. (1987), University of California, Los Angeles.
